CONDREY CORPORATION

Comparing Senergy Releases

Since its introduction in 2006, the technology that is today known as Senergy has consistently been updated with new features designed to address the expanding requirements of network data management. So, if you're using an old version of the product, you're missing out on some advanced product features that can lower your data management costs, address security compliance requirements, keep sensitive data secure, and even protect data from being lost after a ransomware attack.

Feature	Benefit	6.6	6.5	6.2	6.1	6.0	5.x	4.x
Data Owner Web Service	Through a web browser, provides the ability for data owners to perform many of the data management capabilities previously available exclusively in the Data Owner Client.	•						
Security Lockdown Policies	Allow you to establish baseline permissions for a high-value target. When unauthorized access permissions are made, the new permissions are removed, and the baseline permissions are restored.	•	•					
Security Fencing Policies	Allow you to set limits on how access permissions can change over time by specifying containers, groups, or users that can be given access permissions and others that are to never be given access permissions.	•	•					
Windows Server 2019 Support	Manages network storage stored on Windows Server 2019. Windows Server 2019 can also host the File Dynamics Engine, Agents, and Event Monitor.	•	•					
Storage Resources Scoping	Allows you to "scope" the containers of the forest or domain for storage devices and shares to be included or excluded as managed storage resources.	•	•	•				
Security Notification Policies	Allow you to analyze and be notified of the changes in security permissions for a selected target path.	•	•	•	•			
Line-of-Business Data Owner Engagement	Empowers users associated with high-value targets to perform specific types of data management actions including being notified of changes or attempted changes in access permissions, viewing and recovering archived data, and importing and initiating remediation actions via workloads.	•	•	•	•	•		
Data Owner Client	Allows Data Owners to perform selected data management tasks through a specific dashboard.	•	•	•	•	•		
Remediation integration with Galileo	Allows you to address issues discovered through Galileo by means of Senergy policies.	•	•	•	•	•		
Remediation integration with Third Party Utilities and Data Sources	Allows Data Owners to perform administrative tasks by inputting .CSV files created through other applications.	•	•	•	•	•		
Epoch Data Protection	Maintains nearline archives of high-value target shares or folders on the network file system. Data Owners can view and access the archive of	•	•	•	•	•

	the high-value target as it existed at a selected point in time making it an ideal solution for restoring data after a ransomware attack.							
Content Control Policies	Removes files according to file type, age, size, last accessed date, and more. From any file path, you can either vault files to a new location or delete the files altogether.	•	•	•	•	•		
Data Location Policies (Move and Copy)	The means of copying or moving folders and their contents to another location on the network.	•	•	•	•	•		
Workload Policies	Provide the ability to perform large-scale data operations from work processes initiated from other applications.	•	•	•	•	•		
Modernized Admin UI	Management settings grouped logically in tabs for easier overall management.	•	•	•	•	•		
Modernized Quota Manager Interface	Updated with an easier-to-use management interface.	•	•	•	•	•		
High-Performance AD Event Monitor	Significantly improved performance.	•	•	•	•	•		
High-Performance File System Agent	Significantly improved performance.	•	•	•	•	•		
Advanced Scheduling Subsystem	Ability to schedule Target-Driven policies.	•	•	•	•	•		
Active Directory Event Scoping	Ability to “scope" the containers in Active Directory that you want monitored for events.	•	•	•	•	•	•	
Worklog Reports	Historical tracking of events that have reached a processed state, presented in a pivot grid based on the parameters you choose.	•	•	•	•	•	•	
Windows Server 2016 Support	Manages network storage stored on Windows Server 2016. Windows Server 2016 can also host the Senergy Engine, Agents, and Event Monitor.		•	•	•	•	•	
Cross-Empire Data Migration from eDirectory	A wizard-based subsystem within Senergy that migrates file system data between Micro Focus OES and Microsoft networks, including their corresponding storage infrastructures and identity and security frameworks.	Add-on	Add-on	Add-on	Add-on	Add-on	Add-on	Add-on
Collaborative Storage Identity-Driven Lifecycle Management	Automatically provisions and grants access to a shared storage area where a group of people in an organization can collaborate by storing and sharing files.	•	•	•	•	•	•	•
Personal Storage Identity-Driven Lifecycle Management	Automates the provisioning, ongoing management, and disposal of storage located in network user home folders.	•	•	•	•	•	•	•

• Feature available in this version.
